

Major Notices while performing the FileCruiser Backup and Restore

1. FileCruiser can provide user data backup function to another FileCruiser Hardware.
2. The FileCruiser backup hardware needs to have enough free capacity, if we need to restore the backup data on this backup hardware.
3. If the Filecruiser backup hardware doesn't have enough capacity, it will need to be restored back to the original FileCruiser Hardware or you can add additional storage to restore the user data.
